Jean Filipe Delle

Product Owner for Enterprise Analytics Platforms | Data Products,
Governance, AI Adoption & Self-Service BI Transformation
Breslávia e Região

Resumo

I work at the intersection of enterprise analytics platforms, data products, governance, and self-service enablement. My focus is helping organizations scale data-driven decision making while balancing platform governance, security, performance, and innovation speed. I currently lead initiatives across enterprise analytics ecosystems including Microsoft Fabric, Power BI, Qlik, KNIME, Azure, and Unified Data Platforms, supporting both centralized and self-service analytics adoption. My experience includes: -Enterprise analytics platform modernization-Migration from on-premises BI environments to Azure-based platforms-Data Products and Data Mesh enablement-Self-service analytics governance-Power BI & Fabric platform strategy-Cross-functional product ownership and PI planning-Analytics platform scalability and operational governance-AI and emerging technology adoption strategies I am particularly interested in the future convergence of AI, analytics governance, data products, and enterprise self-service ecosystems. I enjoy transforming complex platform challenges into scalable and pragmatic solutions that enable both innovation and operational stability.

Experiência

Volvo Group

4 anos 6 meses

Digital Product Owner — Data & Analytics Platforms

abril de 2024 - Present (2 anos 6 meses)

Vroclav

Contribute to product vision, roadmap, and backlog management for enterprise analytics platforms including Power BI, Microsoft Fabric, Qlik, and KNIME. Lead modernization initiatives migrating analytics workloads from on-premises environments to Azure-hosted Unified Data Platform architectures.

Enable enterprise-wide self-service analytics adoption while balancing governance, security, scalability, and operational sustainability.

Collaborate with architects, stable teams, platform engineers, and business stakeholders to define scalable analytics platform strategies.

Support Data Product and Data Mesh adoption initiatives across analytics ecosystems.

Evaluate emerging technologies and AI capabilities to accelerate analytics enablement and platform evolution.

Define governance frameworks and enablement strategies for citizen developers and data professionals.

Coordinate PI planning, prioritization, and cross-team delivery alignment for analytics platform capabilities.

Drive enterprise analytics operational improvements related to performance, scalability, platform governance, and cost optimization.

Senior Data Architect

abril de 2022 - maio de 2024 (2 anos 2 meses)

Wrocław, Dolnośląskie, Poland

After working as a data analyst at SII consulting for Volvo Group, Volvo decided to hire me as the Data Architect responsible for their BI&AA platforms. In this role, I have been expanding my knowledge of Azure cloud solutions to drive Volvo in leverage the cloud's flexibility and migrate from an on-premise to an on-cloud data platform, which better supports their Business Intelligence and Advanced Analytics services, and ultimately serves their users more effectively.

Sii Poland

Senior BI Engineer

novembro de 2019 - março de 2022 (2 anos 5 meses)

Wrocław, Dolnośląskie, Poland

At SII, I accepted a position as a data analyst for Volvo Group, one of our major clients. I was responsible for working with the QlikView and Qlik Sense environment, as well as NPrinting, to develop reports and dashboards to support the needs of the organization. I worked closely with Volvo Group to understand their business requirements and to develop effective data models and KPIs to support their decision-making processes. This was a significant move for me, as I relocated from my hometown of Curitiba, Brazil to Wrocław, Poland to join the team.

Modus Create, Inc

BI Engineer

abril de 2019 - fevereiro de 2020 (11 meses)

United States, Remote

At my next company, I expanded my skillset by working with Birst dashboards and learning about the US educational system. Additionally, I gained experience with big data technologies, such as Apache Kylin, Teradata Kylo for ETL and governance, and Apache Hive HQLs for data validation, while performing analysis and cube modeling. Through this role, I gained a solid understanding of how big data technologies can be leveraged to support data-driven decision making.

Target Soluções Integradas

Business Intelligence Consultant

junho de 2018 - outubro de 2019 (1 ano 5 meses)

Curitiba e Região, Brasil

At Target, I continued my work with the same client and industry, developing QlikView, QlikSense, and NPrinting cases. I provided analysis and consulting services for data modeling, KPIs, and dashboards to meet the client's strategic needs. Through this role, I developed a strong and lasting relationship with the client, which has continued to create business opportunities for both parties even to this day.

T-Systems do Brasil

Business Intelligence Consultant

junho de 2017 - junho de 2018 (1 ano 1 mês)

Curitiba e Região, Brasil

In my transition from the port terminal industry to the cosmetic retail industry, I gained experience in Qlik Sense development. As a BI consultant, I was responsible for developing QlikView, Qlik Sense, and NPrinting cases for clients, as well as providing analysis and consulting services to support their data modeling and dashboard development needs. Through this work, I honed my expertise in leveraging data to drive business success in new and diverse industries.

RW1 - Gestão e Tecnologia da Informação

Business Intelligence Consultant

setembro de 2015 - junho de 2017 (1 ano 10 meses)

Curitiba e Região, Brasil

After my brief experience with project management, I transitioned back to my career as a BI consultant, focusing on the migration from QlikView to Birst. In this role, I developed Birst cases for clients, analyzed and provided consulting

on data modeling, KPIs, and dashboards. I leveraged my expertise in BI to help clients meet their strategic needs.

Wolk

Project Manager

maio de 2015 - agosto de 2015 (4 meses)

I had a brief experience in project management, including managing insource and outsource employees, controlling deadlines, and managing tasks.

Additionally, I have worked as a Product System Architect using various technologies, such as Ruby on Rails, C#, PhoneGap, and AngularJS, with data storage on PostgreSQL, Redis, and SQLite. I have experience integrating system services, extracting data using desktop applications, and exchanging data via Rest with cloud-based systems. I also have experience developing web and mobile applications for data consumption.

RW1 Gestão e Tecnologia da Informação

Business Intelligence Consultant

novembro de 2014 - maio de 2015 (7 meses)

I began my career in business intelligence and QlikView development. As a developer of QlikView cases for clients, I was responsible for analysis and consulting on data modeling, KPIs, and dashboards. In this role, I leveraged my developing expertise in business intelligence and QlikView to help clients meet their strategic needs.

In addition to my work on QlikView development and consulting, I was also responsible for the maintenance and configuration of licenses, tasks, and schedules on the QlikView Server. Through this work, I helped to ensure that the platform was running smoothly and efficiently, and that clients were able to access the data and insights that they needed to make informed decisions.

Wolk

Web Developer and Analyst

julho de 2013 - novembro de 2014 (1 ano 5 meses)

I was a developer for an asset monitoring system that provided real-time tracking of geographical positioning, work appointment, service order dispatch, construction industry KPIs, and real-time workforce overview. In this project, I leveraged my expertise in PHP programming language and MySQL database to develop the backend functionality. I also utilized frontend framework ExtJs and the Google Maps JavaScript API to create an intuitive and user-friendly interface.

Editora Quantum

Web Developer

setembro de 2012 - junho de 2013 (10 meses)

I maintained and customized the company's systems and websites using PHP programming language and Oracle database. I also utilized an interface library called Smarty with jQuery at the frontend.

GVT

Operations Analyst

março de 2010 - setembro de 2012 (2 anos 7 meses)

Curitiba

At my first job in IT, I embrace the opportunity in developing solutions to deliver information to the operational area and managers through reports, graphs, automated email, and online information with control panels. To accomplish this, I utilized my skills in PHP programming language and worked with Oracle and MySQL databases. I also leveraged my expertise in frontend web development using jQuery and ExtJs, which helped me to develop visually appealing and highly functional interfaces.

In addition to my web development work, I also developed an Android app that enabled field supervisors to manage tasks and the workforce in real-time. This app was a critical tool for the company, as it allowed supervisors to keep track of tasks and allocate resources more efficiently.
